Installing a trusted certificate on an iPhone or iPad

1. Go to http://certificate.pusd.org/ and tap on the certificate

2. The device will prompt to install a profile (the certificate). It will show a warning and then will install the certificate. Once installed the green Verified checkmark will show up.

If you wish to remove the certificate, go to **Settings > General > Profile > [certificate]** and tap on Delete Profile. Some pages won't work properly from within the district if the certificate isn't installed. The certificate won't change any settings or install software on your device and is only used with the district content filter and other PUSD webpages.
